L2	3	((DAMIEN) near2 (YU)).INV.	US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB	OR	ON	2008/02/17 16:20
L5	8	((KENNY) near2 (CHE)).INV.	US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB	OR	ON	2008/02/17 16:21
L7	350	((JIAN) near2 (ZHANG)).INV.	US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB	OR	ON	2008/02/17 16:23
L8	0	(An apparatus for reducing the potential for electric shock a body a battery drawer slidably mounted in the body and being operable to have an open state and a closed state the battery drawer having a cavity and a plurality of contacts arranged to receive at least one battery a battery drawer cover affixed to the body wherein the battery drawer is slidably moveable thereunder separately wherein the battery drawer cover extends at least over the top of the at least one battery in the battery drawer battery drawer closed state even if an interior of the body is exposed, the battery drawer cover obstructs access to the cavity	US-PGPUB	AND	ON	2008/02/17 16:47

		and an ejection mechanism operable to eject the battery drawer from the body and place the battery drawer in the open state the battery drawer is in the open state the plurality of contacts are disengaged from any power source from within the body ejection mechanism biasing means mounted to the battery drawer cover).CLM.				
L9	0	(cordless telephone apparatus having a stand-by battery recharging system, comprising: a base station having a body a battery charging circuit disposed in the body a battery drawer slidably mounted in the body the battery drawer being configured to receive and hold at least one rechargeable battery and a combination ejector and electrical circuit maker all of whose components disposed inwardly within the body with respect to any rechargeable battery held in the battery drawer, wherein the combination ejector and electrical circuit maker establishes an electric circuit between the battery charging circuit and the at least one rechargeable battery when the battery drawer is in a closed state operates to eject the battery drawer from the body and electrically opens	US-PGPUB	AND	ON	2008/02/17 16:50

		the electric circuit between the battery charging circuit and the at least one rechargeable battery when the battery drawer is in an open state and the battery drawer is held captive in the body in the open state).clm.				
L10	0	(battery holding apparatus a battery drawer having a front face and sides the sides respectively having a flange extending at least one contact having front-facing and back-facing portions, the front-facing portion being in contact with a terminal of a battery when the drawer holds a battery an extension portion that extends beyond the at least one contact and in a direction away from the front face and a battery drawer cover having at least one protrusion extending over the extension portion the protrusion having at least one spring arranged to come into contact with the back-facing portion of the at least one contact the at least one spring being in electrical contact with a battery charging circuit when the battery drawer is in a closed state the at least one spring is compressed between the protrusion and the back-facing portion of the at least one contact such that	US-PGPUB	AND	ON	2008/02/17 16:51

		electrical power is provided to the at least one contact, and wherein, when the battery drawer is released to be in an open state the at least one spring acts to push the battery drawer away from the protrusion such that any electrical circuit previously established is opened).clm.
